INTRODUCTION OF THE COMPANY DREAMland, spol. s r.o.

The company DREAMland, spol s.r.o. has been a specialist in the field of industrial automation for many years. Our services are highly valued not only by customers from the industry - we supply to manufacturing companies of all branches, to processing companies, power plants and heating plants, mining operations, healthcare, the food industry, agriculture or the defence and security industries. We are a purely Czech company, but our activities have long expanded beyond the borders of the Czech Republic - we supply to 100+ countries around the world.

We were among the first to establish ourselves on the Czech market with a comprehensive portfolio of services. We sell new parts, but we can also provide refurbished variants for discontinued items.

We have our own repair centre with an area of 800 m², a warehouse with an area of 1,600 m² in which we have more than 130,000 items, and an administrative part with an area of 440 m².

In recent years, we have also become distributors of collaborative and mobile industrial robots of renowned brands.

Our team of specialists helps customers automate and integrate robots into their operations.

Our customers know what they want and we fulfil their aspirations unconditionally. Quality can only exist without compromise and the proof of our responsibility in this regard is certainly the ISO 9001:2015 certificate.

5 BENEFITS OF COOPERATION WITH DREAMLAND PLC:

- ✓ 130,000 items in stock in Kosmonosy
- ✓ Parts pick-up point open 24/7/365
- ✓ Repair of components in exchange
- ✓ Fault diagnosis, our own team of service technicians
- ✓ Repair centre in Kosmonosy

SUBSIDIARIES

Montana s.r.o. Mladá Boleslav has been operating on the market since 1993.

Thanks to the professional work of almost 80 employees, its own production facilities in Mladá Boleslav and the provision of value-added services, Montana, from a small company, has become a leading technology supplier with an international reach.

Montana will continue to pursue the direction of continuous quality improvement in production so that we can provide you with a high standard of service in the upcoming automated industry 4.0.

www.montana-mb.cz

The Czech company Ferrotherm s.r.o. handles the programming of SIEMENS brand control systems and industrial robots from the manufacturers ABB, FANUC, KUKA and Stäubli.

In recent years, the area of supplied services has expanded to include the supply of single-purpose machines and equipment.

At present, Ferrotherm is able to cover a complete project in the field of industrial automation, from analysis through construction to commissioning at the customer and the provision of professional service.

SALE OF NEW PARTS

We deliver new parts to our customers in the original packaging with a full manufacturer's warranty.

Likewise, the customer can request an economical alternative or, for example, a component with specific functionality (converter, adapter). In these cases, we select from a number of proven suppliers and the customer approves the delivery of a certain design according to the technical documentation.

Of course, among the thousands of orders that our company handles every year, it can happen that the customer orders the part incorrectly, but he only finds out when he unpacks a part or even when he has already disposed of the original packaging. That is why we occasionally offer unused parts, unpacked or without packaging, with a correspondingly reduced price while maintaining the warranty.

Our customers are companies from the "top ten" industries, as well as small sole traders whose simple machine broke down.

A small customer is just as important to us as a large customer, taking into account that a small customer can become a

big one over time, and vice versa. We provide support to realization companies and end customers in the form of attractive discounts and advantageous payment terms.

In the case of the Siemens brand, these are our main product lines: **Simatic S5, Simatic S7, Sinumerik, Simodrive, Micromaster, Masterdrive, Sinamics, Simoreg, Servomotors, HMI panels, industrial PCs and software.**

From a number of other manufacturers you will find parts of the following brands in our range: **Balluff, Bosch Rexroth, Allen Bradley, Festo, Schneider, Omron, Mitsubishi or any other brand on request.**

24 *warranty up to 24 months*

SALE OF REFURBISHED PARTS

In every industrial operation, retrofitting is sometimes carried out, production technology changes, or even technological units are eliminated. Of course, this is also associated with the elimination of specific technology and related spare parts warehouses.

We buy the parts contained in the technology, run diagnostics on used ones, repair them or carry out a complete overhaul, depending on the state of wear.

Therefore, we can offer refurbished and used parts. The motivation is, of course, of an economic nature - a refurbished part is cheaper than a new one, but with the same guarantee as a new part.

It is very important that thanks to refurbished parts, we are able to provide our customers with deliveries of parts that

are no longer manufactured, unavailable, controllably frozen by the manufacturer. We enable you to extend the effective operation of your technologies. In addition, we usually have refurbished parts in stock, ie available with a transport service or immediately in the case of personal collection.

From Siemens, we mainly sell the following refurbished product lines: **Simatic S5, Simatic S7, Sinumerik, Simodrive, Micromaster, Masterdrive, Sinamics, Simoreg, Servomotors, HMI panels, industrial PCs and software.**

We also offer refurbished parts of the following brands: **Balluff, Bosch Rexroth, Allen Bradley, Festo, Schneider, Omron, Mitsubishi or any other brand on request.**

REPAIR CENTER IN
THE CZECH REPUBLIC

REPAIRS AND DIAGNOSTICS OF AUTOMATION

As one of the few domestic companies in the field of industrial automation, we have our own, fully equipped, repair centre. While the competition only collects parts for repairs and sends them abroad, we actually carry out repairs up to the "component level".

Of course, it doesn't make sense to carry out all of the repairs ourselves. Over the years on the market, we have developed a scheme of cooperation with partner services, so we can focus on the types of repairs that we are able to do really effectively - we complement our partners and cooperate in the range of brands and types of parts.

Our own qualified service staff brings our customers additional benefits that they will not find in the competition. For example, the repair time is reduced by the time required for transport. Our technicians are able to respond and perform service directly on the equipment in operation, quickly and efficiently. The response time in the case of warranty and post-warranty repairs is also shortened, we are able to perform express repairs within 24 hours under certain circumstances - the phrase "time is money" is doubly true for automation.

We also perform, for example, application backups, firmware updates, software modifications.

Of course, the customer is always interested in the price of the repair. The experience of our technicians and at the same

time the number of repairs performed allow us to determine the "statistically probable cost of repair" for a particular part. The price of the repair is set in advance and does not change. Our customers can thus calculate the effectiveness of the repair in advance and make rational decisions.

The number of repairs performed allows us to provide another service that is very positively evaluated by customers. It's a repair in exchange. The logistical concept of our service makes it possible to coordinate the delivery times of individual repairs so that we are able to deliver the repaired part to the customer even before the non-functional part gets to the service.

In practice, this service is provided in such a way that the customer orders the delivery of the repaired part within the required period of 24 hours/week or within the agreed delivery date (for example, for a planned shutdown), while the damaged part is still in the machine and allows operation in limited or emergency mode. After receiving the repaired part, our customer performs the replacement (or parametrization according to the original part or dragging the application) and sends the damaged part to our headquarters in Kosmonosy during a week period.

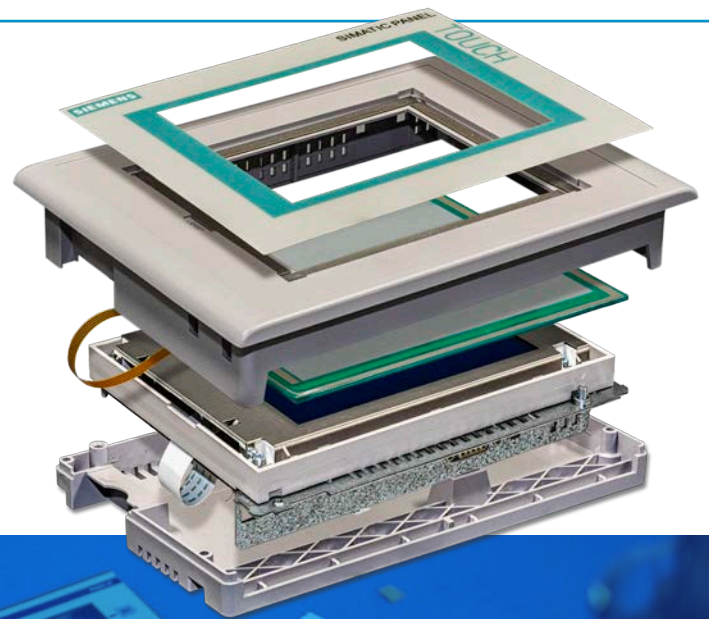

A non-functional part becomes our property, after the repair it is included in the "cycle" of repaired parts for the purpose of repairs in exchange.

WHAT DO WE REPAIR?

Basically the entire Siemens range - product lines **Simatic S5**, **Simatic S7**, **Sinumerik**, **Simodrive**, **Micromaster**, **Masterdrive**, **Sinamics**, **Simoreg**, **Servomotors**, **HMI panels**, **industrial PCs** and software.

In the case of Siemens servomotors, we are able to perform complete diagnostics, replacement of defective components (brakes, encoders, connectors, forced cooling), rewinding, mechanical repairs and final adjustments.

Other brands: **Allen Bradley**, **Fanuc**, **Schneider**, **Texas Instruments**, **Danfoss**, **ABB**, **Mitsubishi**, **Omron**, **Vipa**, **Bosch Rexroth** **Indramat**, **Balluff**, **SICK**, **SEW**, **Festo**, **Turck**, **SMC**, **IFM**, **IPF**, **Murr**, **Rockwell**, other manufacturers on request.

PRODUCTION LINES

OFFER US YOUR
UNNECESSARY PART
FOR PURCHASE

PURCHASE OF UNREQUIRED PARTS AND TECHNOLOGY

As already mentioned in the section "Sale of refurbished parts", the automation hardware obtained by purchase is an important source of parts for repairs and overhauls for us. Of course, we are mainly interested in discontinued or otherwise "rare" parts.

Each component has a price. Even if non-functional or mechanically damaged. Above all, we buy parts from cancelled warehouses, idle hardware from implementations, used functional groups, which have been discarded after technology modernization.

We mainly purchase the following product lines from Siemens: **Simatic S5, Simatic S7, Sinumerik, Simodrive, Micro-master, Masterdrive, Sinamics, Simoreg, Servomotors, HMI panels, industrial PCs and software.** But we also purchase parts of other brands, such as: **Balluff, Bosch Rexroth, Allen Bradley, Festo, Schneider, Omron, Mitsubishi.** Do you have another brand part for sale? Contact us and we will take a look at it together.

We also buy entire production lines, we dismantle equipment, carry out the professional disposal of unusable electrical waste and scrap metal, including the subsequent cleaning of the premises. You can contact us and arrange our visit to the liquidated plant or send a list of parts, ideally containing the manufacturer's order codes and information about the condition of the part, eg new - closed/open/without packaging, used - functional/non-functional.

Based on this information, we will offer you an interesting purchase price.

MANUFACTURE OF SINGLE-PURPOSE MACHINES AND SWITCHBOARDS

Our implementation division consists of a team of experts who specialize in the construction of automation applications. The lowest level is simple electrical work and the production of switchboards. However, the potential of the implementation team is much higher, the scope is many times wider.

Suppose, you need to modify the software of your machine, retrofit its hardware or expand the technological possibilities.

A typical task is also a retrofit of a piece of equipment, the action or mechanical part of which is in good condition, while the control system is outmoded or built on hard-to-find components of an exotic manufacturer.

Or you need to supply a complete device - single-purpose machine, robotised technological cell, handling intermediate element, the whole production line?

The 2016 acquisition of, Montana s.r.o. Mladá Boleslav, which, after years of cooperation, joined our ownership group, significantly expanded its scope and possibilities in the field of supplies of technological units and production lines.

Today, we can combine the great capabilities of the DREAMLAND team in the field of automation with a wide range of Montana engineering production and embark on very demanding implementations.

SIEMENS AUTOMATION SUPPORT AND TRAINING

We have prepared an offer of several individual training courses for you and your colleagues, with the focus on the above topics.

Choose the one that suits you best, register and we will contact you with more information.

If you cannot find what you need in the listed topics, we can prepare training tailored to your requirements.

The training takes place in our new training facilities at:

DREAMland, spol. s.r.o.
Duhová 1013
29306 Kosmonosy

AVAILABLE TRAINING TOPICS:

SIEMENS industrial automation

PLC - TIA micro systems

- LOGO! 8 programmable relays
- S7-1200 for small applications

PLC - TIA control systems

- S7-1500 medium and demanding applications
- S7-300 standard application

TIA Decentral periphery

- ET200 Profinet

TIA HMI visualization

- Button and touch control panels
